Introduction

A considerable number of parenting students attend community colleges. This report highlights parenting students' college experiences at community colleges across the nation and explores how community colleges can better support their engagement and academic success. It is worth noting that this methodology supplement encompasses both the findings presented in this report and additional results from analyses that were conducted during the preparation of this national report.

Method

Data

The data presented in this report were collected from 2024 Community College Survey of Student Engagement (CCSSE) and an 15-item Culture of Caring itemset (https://cccse.org/sites/default/files/documents/culture-of-caring-items.pdf). CCSSE is administered during the spring academic term; all students over the age of 18 in credit-bearing classes or developmental education courses are eligible to participate in the survey. Students are instructed to consider their experiences over the whole academic year when completing CCSSE. Colleges have the choice of administering the survey online or in class on paper. For paper administration, colleges provide a list of all credit-bearing and developmental education courses to CCCSE, and the CCCSE research team then selects a random sample of classes in which the survey will be administered. For online administration, participating colleges send a survey link to all eligible students as there is no sampling with the online administration. For the results presented in the report, we removed missing values on survey question: *Do you have children who live with you and depend on you for their care?* This report includes data from 69,518 students across 164 community colleges who responded to the CCSSE in spring 2024. Among them, 50,123 students from 127 of 164 CCSSE colleges responded to the Culture of Caring itemset.

Analyses

The analyses conducted for this national report involve frequencies and means of CCSSE 24 items. We applied SAS PROC FREQ procedure to calculate the frequencies, percentages, and cross-tabulations of all student responses to the main CCSSE. New variables were constructed to facilitate a deeper understanding of the data. For instance, we used CHILDREN and COLGPA to create a new variable that has four response options: *1. A parent who has a self-reported college GPA equal or above B; 2. A parent who has a self-reported college GPA below B; 3. A non-parent who has a self-reported college GPA equal or above B; 4. A non-parent who has a self-reported college GPA below B*. In addition, we utilized the SAS PROC MEANS procedure to analyze CCSSE benchmarks. Benchmarks are groups of conceptually related survey items that focus on institutional practices and student behaviors that promote student engagement—and that are positively related to student persistence and completion.

The five CCSSE benchmarks of effective educational practice in community colleges are *active and collaborative learning* (ACTCOLL), *student effort* (STUEFF), *academic challenge* (ACCHALL), *student-faculty interaction* (STUFAC), and *support for learners* (SUPPORT). For a detailed explanation of how CCSSE benchmarks are calculated, please see: https://www.ccsse.org/survey/docs/HowBenchmarksAreCalculated_2022.pdf

Weighting

We applied weighting to correct for a respondent bias due to the fact that a disproportionate number of full-time students and women completed the survey (see "CCSSE Sampling, Weighting, and Local Student Characteristics" for a discussion of sampling and weighting at https://www.ccsse.org/survey/reports/2023/understanding.cfm#weights). Except for frequencies for student demographics, enrollment status, and cross-tabulations involving enrollment status (ENRLMENT) and/or gender identity (GENDER), all other results presented in the report are weighted. Because of weighting, frequency counts in the national report will include decimal points; counts in the report are rounded to the nearest integer.
